

New "Xeon" 200 Channel Digital System

Released August 2008

The greatest technology to hit peep show systems just got better.

Videotel's latest innovation takes our proven Digital System Software and installed it on a faster and more reliable computer.

Here are some advantages our latest release...

- We have eliminated the need for multiple "streaming computers". Instead of needing 5 computers to run 200 channels, we can now do it on 2!

- The new processing/streaming computers use a Dual Quad Core Intel Processor.

- **Now movies can be processed 2 times faster. This allows you to change up to 25 movies per day.**

- New smaller, compact and simpler rack. Our new computer rack system is only 26" wide x 34" deep and the top of the monitor is only 58" tall. With fewer computers the wiring is even easier than before. All of our racks are pre wired and each cable has been numbered for ease of installation and trouble free maintenance.

- Less electricity usage (consumes almost 1/2 of the electricity of our original 200 channel digital system).

- **Lower purchase price.**

- All hard drives that run the system are now "hot swappable raid drives". This means that if 1 of the drives fails the other 1 or 2 drives will take over automatically. The system operates exactly the same until a new drive is added. **Zero down time if a hard drive drive fails.**
